Federal Aviation Administration

Initial En Route Qualification Training

Instructor
Lesson 05
Flight Progress Strips

Course 50148001

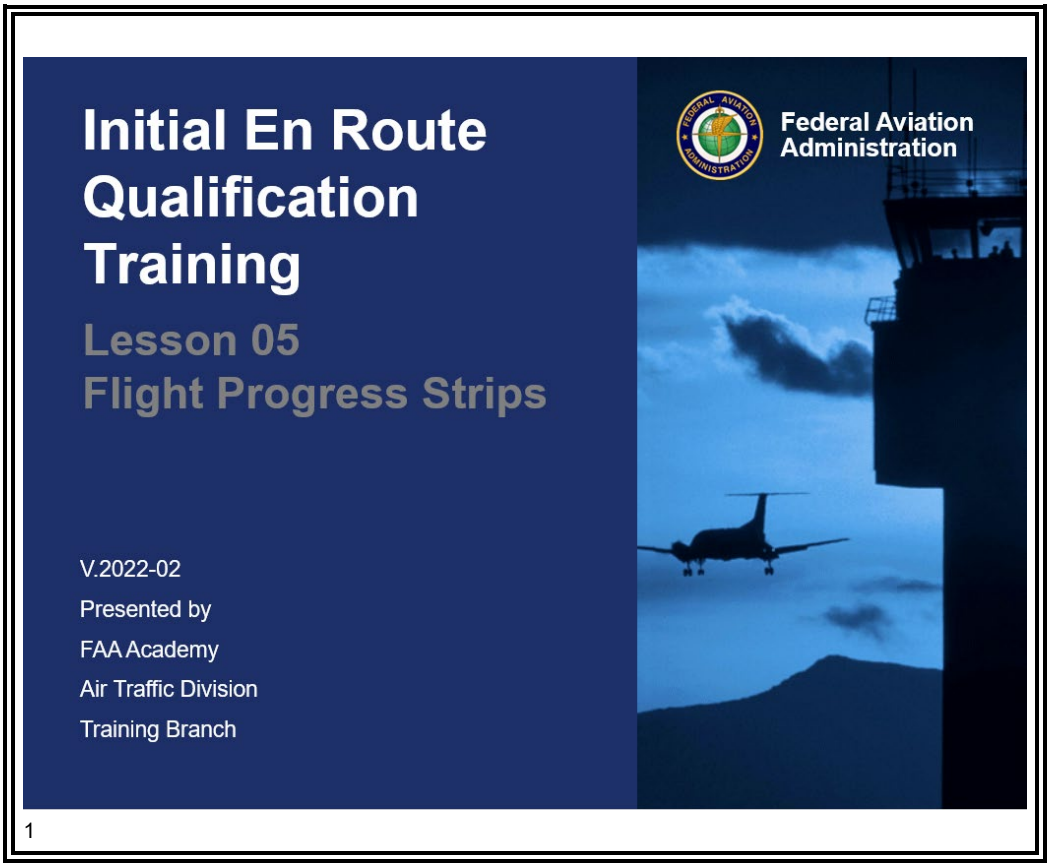
LESSON PLAN DATA SHEET

COURSE NAME:	INITIAL EN ROUTE QUALIFICATION TRAINING
COURSE NUMBER:	50148001
LESSON TITLE:	FLIGHT PROGRESS STRIPS
DURATION:	8+15 HOURS
DATE REVISED:	2022-02
VERSION:	V.2022-02
REFERENCE(S):	FAA ORDER JO 7110.65, AIR TRAFFIC CONTROL
HANDOUT(S):	NONE
EXERCISE/(S)/ ACTIVITY(S):	ACTIVITY 1: PROPOSAL/DEPARTURE STRIP ACTIVITY 2: EN ROUTE STRIP ACTIVITY 3: ARRIVAL STRIP ACTIVITY 4: FLIGHT PROGRESS STRIP CHALLENGE EXERCISE 1: IDENTIFYING INFORMATION ON FLIGHT PROGRESS STRIPS EXERCISE 2: COMPUTING AND RECORDING PLUS TIMES AND ESTIMATES EXERCISE 3: RECORDING FLIGHT PLANS AND DETERMINING FIX POSTING (USE AERO CENTER MAP WITH JET ROUTES FOR THIS EXERCISE)
END-OF-LESSON TEST:	YES *(REFER TO ELT05.PDF)*
PERFORMANCE TEST:	NONE
MATERIALS:	NONE
OTHER PERTINENT INFORMATION:	*INSTRUCTOR KEY FOR THE ELEARNING(S) IS INCLUDED AS AN APPENDIX IN THIS DOCUMENT*

☞ ***NOTE:*** *As you prepare for this lesson, recall and be prepared to talk about examples and personal experiences that illustrate or explain the teaching points in the lesson.*

INTRODUCTION

Gain Attention



You have been introduced to the airspace for which you are responsible including airways, NAVAIDs, MEAs, sectors, Special Use Airspace, fixes, and mileages, etc. Now you will be introduced to flight progress strips. The ability to accurately recall your airspace will allow you to use flight progress strips to safely and efficiently move aircraft through your sector.

INTRODUCTION *(Continued)*

Opening Scenario

FLIGHT PROGRESS STRIPS

2

Flight progress strips are an official record of control data and are used to reconstruct flight activities in the event of a systems error, deviation, or accident. Even with advanced automation systems, strips are still required in the field.

You will use flight progress strips to anticipate and organize flights entering, within, and leaving your airspace. It is essential for controllers to be proficient in quickly identifying and interpreting the data contained in the various types of flight progress strips.

Purpose

In this lesson, you will be taught how to prepare flight progress strips for departure, arrival, and en route flight plans, including which fix postings are required for a given flight plan based on the filed route and where to enter this data on the flight progress strip. You will also learn how to determine and enter estimates using plus times.

Continued on next page

INTRODUCTION *(Continued)*

Lesson Objectives

LESSON OBJECTIVES

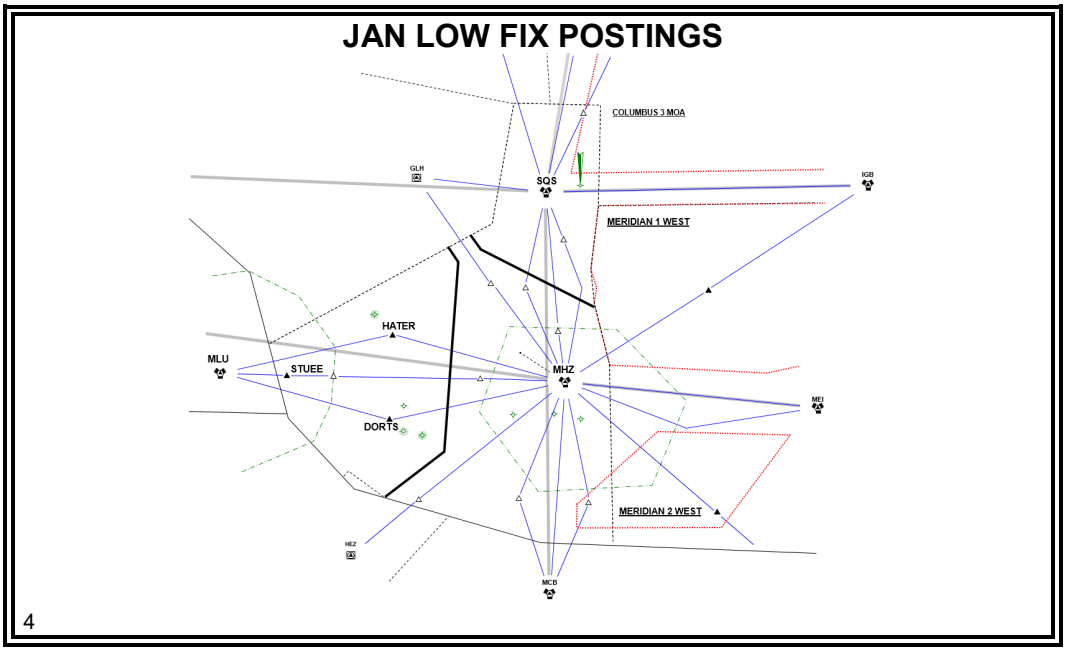
- On an End-of-Lesson Test, and in accordance with FAA Order JO 7110.65 and the Aero Center (ZAE) Map, you will:
  - Determine the required fix postings for departure, arrival, and en route aircraft
  - Identify designated spaces for data entries and control symbols
  - Determine estimates using plus times

3

☞ ***NOTE:*** *Teach from graphic.*

FIX POSTINGS

JAN Low Altitude Fix Postings
Aero Center Map



- This section covers Fix Posting Areas (FPAs) for Aero Center (Jackson Low sector).

- Jackson Low sector is divided into three FPAs (SQS, MHZ, VKS).
  - These FPAs are also used as bay headers
    - Bay headers allow for a more organized traffic search since there is **only** one strip per aircraft in each FPA

- Each route or airway in the Jackson Low sector has a specific fix posting for each FPA.

  Example: Victor 18 has two fix postings: one at MHZ and one at STUEE, which is posted under the VKS bay header.

NOTE: A list of JAN Low sector fix postings for both victor and jet airways is included in Appendix A of this lesson.

- Each airway/route has at least one fix posting (strip) in the Jackson Low sector.

☞ ***NOTE:*** *Explain to students that there should be a flight progress strip for each fix posting area that an aircraft traverses in the sector.*

Continued on next page

FLIGHT PROGRESS STRIPS

Stripmarking Use
JO 7110.65, par. 2-3-1

⊙ Flight progress strips are used to record data on air traffic and clearances that is required for control and other air traffic services.

- Maintain **only** necessary current data
  - Remove strips when **no** longer required for control purposes
- Do **not** erase or overwrite
  - Use an “X” to delete:
    - → Climb/descend and maintain arrows
    - → At or above/below symbols
    - → Cruise symbol
    - → Unwanted altitude information

☞ ***NOTE:*** *Show examples on the board.*

  - Write new altitude information immediately adjacent to old information and within the same space
    - → Draw a horizontal line through other items
    - → Do **not** draw a line through an altitude until the aircraft reports or is observed (valid Mode C) leaving the altitude

⊙ Preplanning may be written in red.

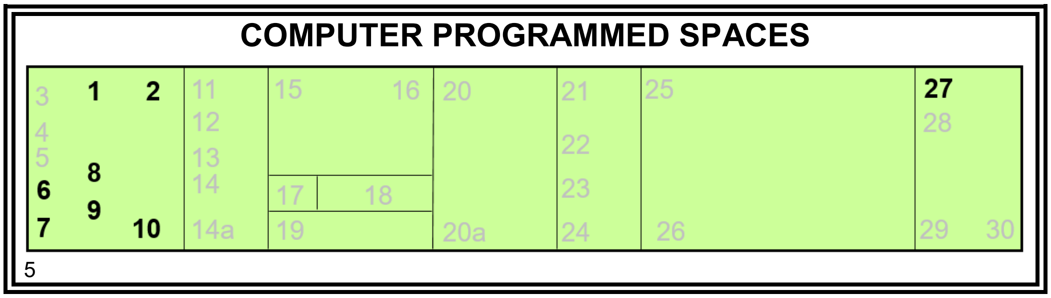
- Rewrite in black after the clearance is issued
  - Do **not** overwrite

☞ ***NOTE:*** *Explain to students that in some instances they may circle red text in black.*

⊙ Manually prepared strips **must** conform to the same format as machine-generated strips.

FLIGHT PROGRESS STRIPS *(Continued)*

Computer Programmed Spaces
JO 7110.65, par. 2-3-2



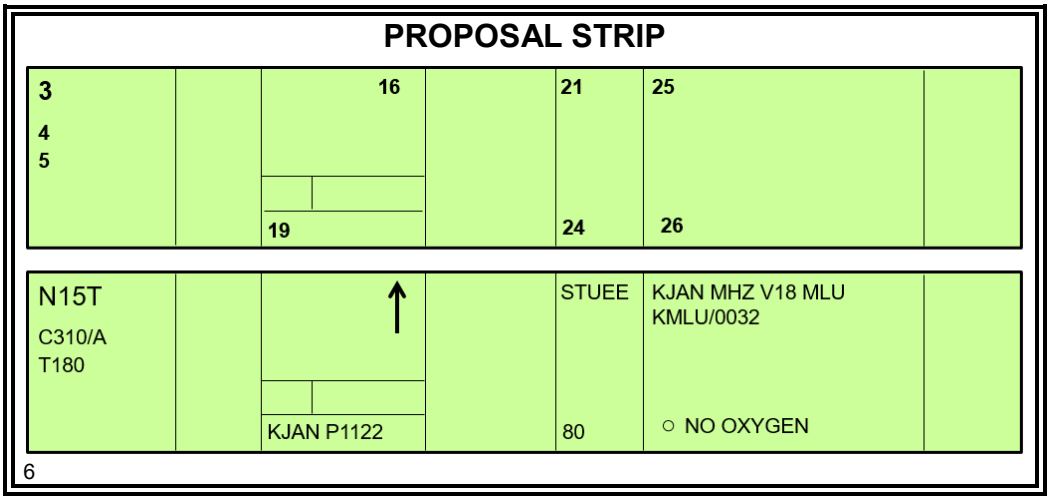
NOTE: For a complete list of the spaces where data is entered on a flight progress strip, see Appendix B.

⊙ The computer will put information in the following computer-programmed spaces:

- Space 1 - Verification symbol, if required
- Space 2 - Revision number
- Space 6 - Sector number
- Space 7 - Computer Identification (CID) number
- Space 8 - Estimated ground speed
- Space 9 - Strip Request (SR) originator or revised ground speed
- Space 10 - Strip number
- Space 27 - Mode 3/A beacon code, if applicable

PROPOSAL STRIP

Proposal Strip
JO 7110.65, pars. 2-3-6, 2-3-2, 2-3-8, table 2-3-10;



⊙ A proposal strip should include the following information:

- Space 3 - Aircraft Identification (AID)
  - Appropriate prefix followed by a combination of letters and/or numbers
  - Seven maximum allowable characters
- Space 4 - Aircraft data
  - Number of aircraft, if more than one
  - Heavy indicator, if appropriate
    - → "H" followed by slant (/)
  - Type aircraft

NOTE: JO 7110.65 par. 2-3-6 requires, in both automated and non-automated environments, the use of the approved aircraft type codes contained in Appendices A-C to indicate aircraft type.

  - Equipment suffix
    - → Appropriate letter preceded by slant (/) and following aircraft type indicating aircraft's transponder, DME, or RNAV capability

Continued on next page

PROPOSAL STRIP *(Continued)*

Proposal Strip (Cont'd)
JO 7110.65, pars. 2-3-6, 2-3-2, 2-3-8, table 2-3-10;

	No Transponder	Transponder – No Mode C	Transponder With Mode C
No DME	X	T	U
DME	D	B	A
TACAN Only	M	N	P
RNAV	Y	C	I

NOTE: Equipment suffix determines type of clearance/routing aircraft can accept. For example, a /X cannot accept a clearance with a DME crossing restriction and in a radar environment, a /X cannot ident for radar identification.

NOTE: The above chart lists **only** those suffixes most commonly used in ZAE nonradar labs. The complete chart from FAA Order JO 7110.65 is in Appendix C of this lesson.

- Space 5 - Filed true airspeed
  - "T" followed by two to four digits
  - "SC" = Speed Classified
- Space 16 - Departure arrow (↑)
- Space 19 - Fix and proposed departure time
  - Location identifier
  - "P" followed by 4-digit Proposal time (P-time)
- Space 21 - Next posted fix or coordination fix

Continued on next page

PROPOSAL STRIP *(Continued)*

Proposal Strip (Cont'd)
JO 7110.65, pars. 2-3-6, 2-3-2, 2-3-8, table 2-3-10;

- Space 24 - Requested altitude
  - Single altitude
    - → Two or three digits representing altitude in hundreds of feet
  - Altitude block
    - → "(Altitude)B(altitude)"
    - → Lowest altitude first
- Space 25 - Point of origin, route, and destination
  - Location identifier
  - Victor airways, jet routes, or direct routes
  - Estimated Time En Route (ETE) follows destination on general aviation departure aircraft
    - → To convert ETE to Estimated Time of Arrival (ETA), add ETE to departure time. General aviation pilots are required to file ETE.
- Space 26 - Pertinent remarks
  - Use plain language, or
  - Words/phrases/symbols contained in FAA Order JO 7110.65, par. 1-2-1

NOTE: KJAN proposal strips do not have a dedicated space for a MHZ VORTAC progress time. If a MHZ progress time is needed for separation, it must be recorded in space 26 using this format: MHZ/XXXX. KGWO proposal strips do not have a dedicated space for a SQS VORTAC progress time. If a SQS progress time is needed for separation, it must be recorded in space 26 using this format: SQS/XXXX.

☞ ***NOTE:*** *Examples: Minimum fuel, point out/radar vector/speed adjustment information or sector/position number (in accordance with FAA Order JO 7110.65, paragraph 2-2-1, or North American Route Program [NRP]).*

- Space 27 - Beacon code
  - Normally assigned by the computer

PROPOSAL STRIP *(Continued)*

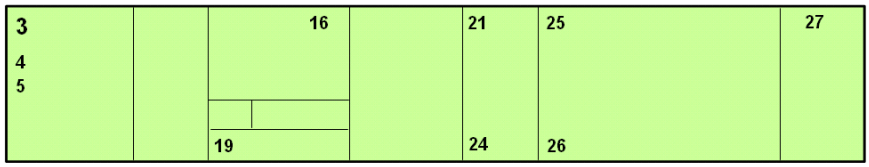
Knowledge Check (Cont'd)

KNOWLEDGE CHECK

QUESTION: What information is entered in the spaces on the strip below?



10

☞ ***NOTE:*** *Click 10 times to build graphic.*

ANSWERS:

Space 3 - Aircraft ID

Space 4 - Number of aircraft, heavy, type, and suffix

Space 5 - Filed true airspeed

Space 16 - Departure arrow

Space 19 - Fix identifier and proposed departure time

Space 21 - Next posted fix

Space 24 - Requested altitude

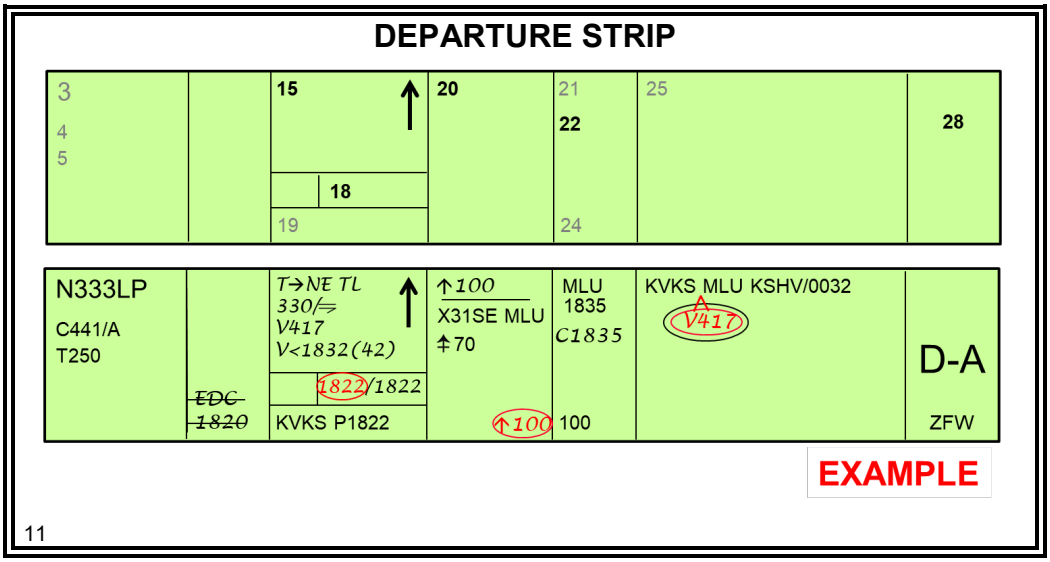
Space 25 - Point of origin, route, destination

Space 26 - Pertinent remarks

Space 27 - Beacon code

DEPARTURE STRIP

Departure Strip
JO 7110.65, par. 2-3-2



☞ ***NOTE:*** *Point out the following information and discuss examples with students.*

⊙ A departure strip should include the following information:

- Space 15 - Clearance information for departing aircraft
- Space 18 - Departure time (assumed and/or actual)
- Space 20 - Altitude information
  - Including restrictions
- Space 22 – Pilot's estimated time over next fix, Center estimated time over next fix (written in the format "C1234") under the pilot's estimated time.
- Space 28 - Miscellaneous control data
  - Clearance limit
- Spaces 29-30 - Transfer-of-control data and coordination indicator, if required

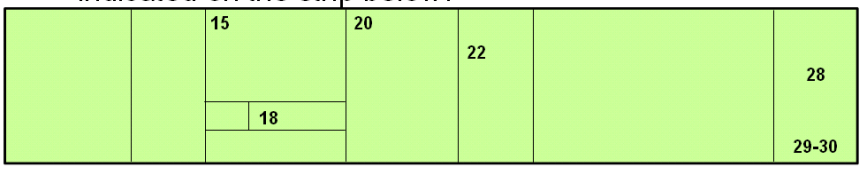
Continued on next page

DEPARTURE STRIP *(Continued)*

Knowledge Check

KNOWLEDGE CHECK

QUESTION: What information is displayed in the space indicated on the strip below?



12

☞ ***NOTE:*** *Click 7 times to build graphic.*

ANSWERS:

Space 15 - Clearance information for departing aircraft

Space 18 - Departure time (actual or assumed)

Space 20 - Altitude information

Space 22 – Pilot's estimated time over next fix, Center estimated time over next fix

Space 28 - Miscellaneous control data

Spaces 29-30 - Transfer-of-control data and Coordination indicator

DEPARTURE STRIP *(Continued)*

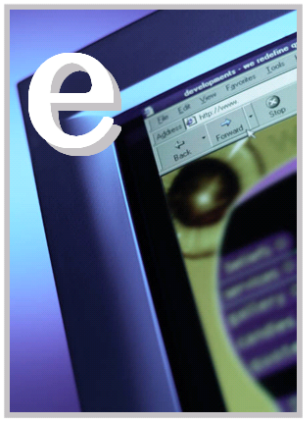
Activity 1

PROPOSAL/DEPARTURE STRIP ACTIVITY



Purpose: to practice identifying and labeling designated spaces on proposal and departure strips

15

☞ ***NOTE:*** *Have the students access the IET eLearning menu and select the Proposal/Departure Strip activity for Lesson 5.*

Description

In this activity, you will practice identifying and labeling designated spaces on proposal and departure strips.

Directions

Access the IET eLearning menu. Select **Lesson 5 – Flight Progress Strips**. Click on the title to launch the **Proposal/Departure Strip** activity.

Time Allotted

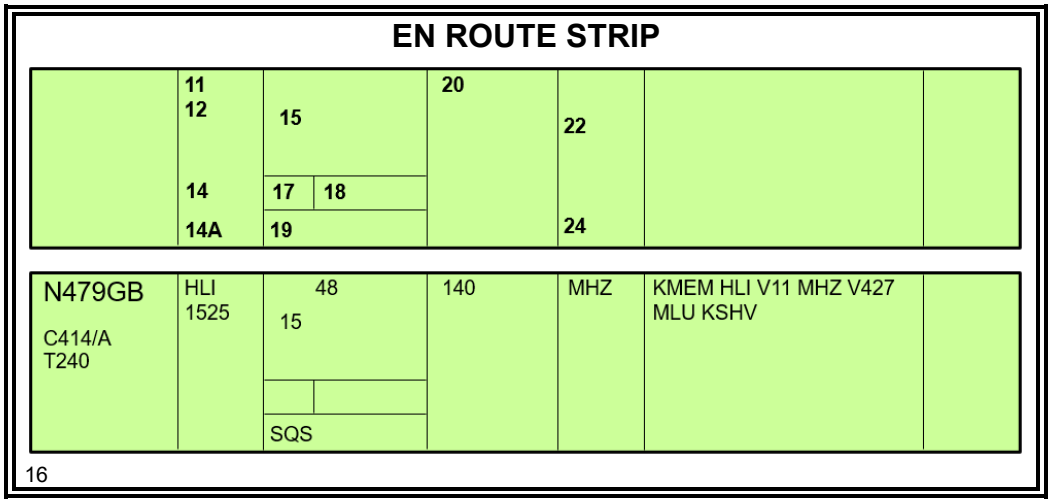
10 minutes

☞ ***NOTE:*** *Refer to Appendix D for the Instructor Key for this eLearning activity.*

☞ ***NOTE:*** *Remember to disable the eLearning after the students complete the eLearning.*

EN ROUTE STRIP

En Route Strip
JO 7110.65, par. 2-3-2



☞ ***NOTE:*** *Discuss examples with students.*

⊙ An en route strip should include the following information:

- Space 11 - Previous fix
- Space 12 - Estimated time over previous fix

NOTE: The time in Space 12 of an en route flight strip is usually a center estimate.

- Space 14A - Plus time expressed in minutes from the previous fix to the posted fix
  - Determined by the distance between the two fixes and the speed of the aircraft using the Quick Estimate Method

NOTE: Calculations for Plus Time and Post Fix Estimates will be explained in subsequent slides.

- Space 15 - Center estimate over the posted fix
- Space 19 - Posted fix
- Space 20 - Altitude information

Continued on next page

EN ROUTE STRIP *(Continued)*

En Route Strip (Cont'd)
JO 7110.65, par. 2-3-2

⊙ An en route strip may also include the following information:

- Space 14 - Actual departure time entered on first fix posting after departure
- Space 17 - Pilot-estimated time over fix
- Space 18 - Actual time over fix
- Space 22 – Pilot's estimated time over next fix, center estimated time over next fix (calculate center estimates only when you need to prove separation)
- Space 24 – Requested Altitude

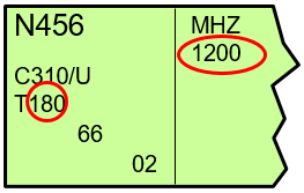
Quick Estimate Method

DETERMINE DISTANCE TRAVELED

DT = MPM x TM

Example:

12:07



18 / 6 = 3 (MPM)

1207 - 1200 = 7 (TM)

3 x 7 = 21 (DT)

The aircraft has flown 7 minutes past MHZ at 3 miles per minute and should be approximately 21 miles past MHZ.

17

☞ ***NOTE:*** *Click 4 times to build graphic.*

⊙ Quick Estimate Method

- Use this method to determine the distance an aircraft will travel in an allotted time
  - Divide the first two digits of the aircraft's speed by 6 to determine Miles Per Minute (MPM)
  - Distance Traveled (DT) equals MPM multiplied by Time in Minutes (TM)

NOTE: Time in minutes comes from difference between fix time and clock time.

Example: An aircraft has a MHZ estimate of 1200. Clock time is 1207. True airspeed is 180 knots (3 miles per minute). Aircraft has flown 7 minutes past MHZ at 3 miles per minute and should be approximately 21 miles past MHZ.

DT = 3 x 7
DT = 21 miles

Continued on next page

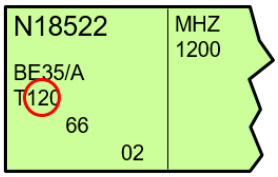
EN ROUTE STRIP *(Continued)*

Quick Estimate Method (Cont'd)

DETERMINE CENTER ESTIMATES

$$TM = \frac{DT}{MPM}$$

Example:



58 = DT between MHZ and SQS

12 / 6 = 2 MPM

58 / 2 = 29 (TM)

The aircraft is traveling 58 miles (DT) between MHZ and SQS at 2 miles per minute (MPM). The time in minutes for this travel is 29 minutes, which added to the MHZ estimate of 1200, means the estimate for SQS is 1229.

18

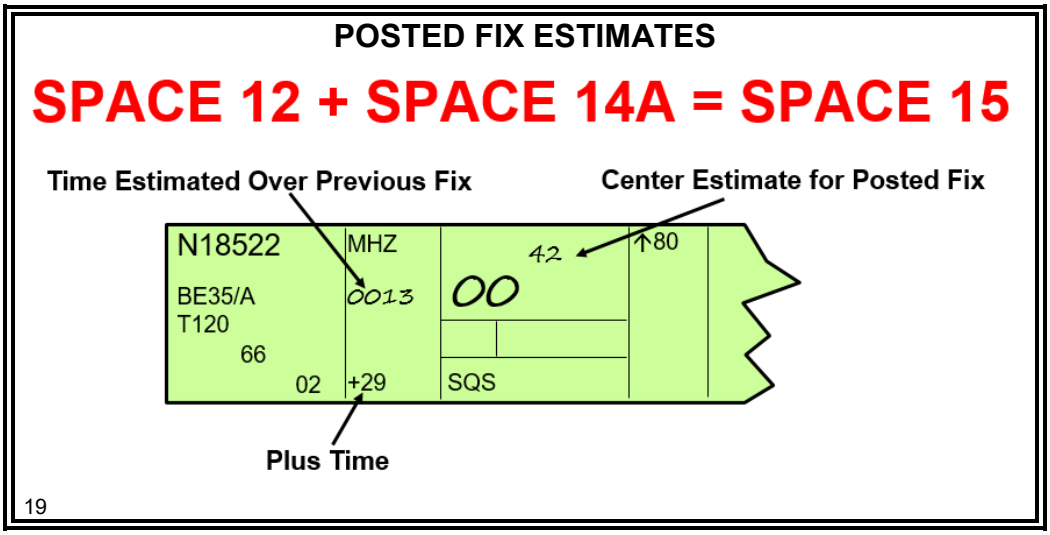
☞ ***NOTE:*** *Click 3 times to build graphic.*

- Use this method to compute center estimates at fixes

Continued on next page

EN ROUTE STRIP *(Continued)*

Post Fix Estimate



⊙ Use this method to compute posted fix estimates.

- Time estimated over the previous fix added to the plus time results in the center estimate for the posted fix

☞ ***NOTE:*** *Show an example on the board.*

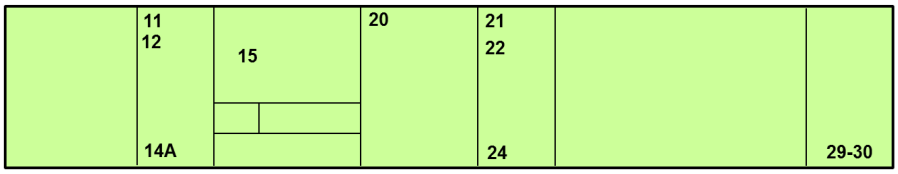
Continued on next page

EN ROUTE STRIP *(Continued)*

Knowledge Check

KNOWLEDGE CHECK

QUESTION: What information is displayed in the following spaces of an en route strip?



20

☞ ***NOTE*:** *Click 9 times to show answers.*

ANSWERS:

Space 11 - Previous fix

Space 12 - Previous fix estimate

Space 14A - Plus time

Space 15 - Center estimate for posted fix

Space 20 - Altitude information

Space 21 - Next fix

Space 22 – Pilot's estimated time over next fix, center estimated time over next fix (calculate center estimates only when you need to prove separation)

Space 24 – Requested altitude

Spaces 29-30 - Coordination indicator

☞ ***NOTE:*** *Refer to Appendix D for the Instructor Key for this eLearning activity.*

☞ ***NOTE:*** *Remember to disable the eLearning after the students complete the eLearning.*

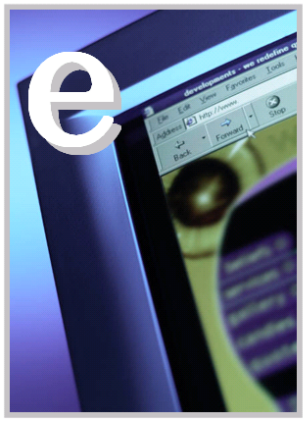
FLIGHT PROGRESS STRIP CHALLENGE

Activity 4

FLIGHT PROGRESS STRIP CHALLENGE ACTIVITY



Purpose: to practice identifying and labeling designated spaces on proposal, en route, and arrival strips

25

☞ ***NOTE:*** *Have the students access the IET eLearning menu and select the Flight Progress Strip Challenge activity for Lesson 5.*

Description

In this activity, you will practice identifying and labeling designated spaces on proposal, en route, and arrival strips.

Directions

Access the IET eLearning menu. Select **Lesson 5 – Flight Progress Strips**. Click on the title to launch the **Flight Progress Strip Challenge** activity.

Time Allotted

15 minutes

☞ ***NOTE:*** *Refer to Appendix D for the Instructor Key for this eLearning activity.*

☞ ***NOTE:*** *Remember to disable the eLearning after the students complete the eLearning.*

EXERCISE 1: IDENTIFYING INFORMATION ON FLIGHT PROGRESS STRIPS

Exercise 1

IDENTIFYING INFORMATION ON FLIGHT PROGRESS STRIPS EXERCISE

Purpose: to practice identifying information on flight progress strips

Directions: review provided strips and answer the corresponding questions

26

Directions

Items 1 through 15 are short answer. Review the strips provided to answer the questions. All strips in this exercise would be posted in the same bay. Some questions refer to more than one strip. Write your answers in the spaces provided.

Questions

EXERCISE 1 STRIPS – Q1, Q2, Q3

ANSWER: *32*

EXERCISE 2: COMPUTING AND RECORDING PLUS TIMES AND ESTIMATES

Exercise 2

COMPUTING AND RECORDING PLUS TIMES AND ESTIMATES EXERCISE

Purpose: to practice computing plus times and posted fix estimates

Directions: review provided strips and determine plus times or posted fix estimates as appropriate

33

Directions

For items 1 through 6, use the strips provided to compute the plus times for inactive flights and posted fix estimates for active flights. Write your answers in the spaces provided. Refer to the Aero Center map to obtain mileages.

☞ ***NOTE:*** *Students will need to use values from the MPM chart.*

☞ ***NOTE:*** *After students have completed the exercise, you may select students to write answers on the board or show students answers using the graphics. Click the button once to make the answer appear on the strip in each graphic. Student's answers should be within plus or minus one minute.*

EXERCISE 2: COMPUTING AND RECORDING PLUS TIMES AND ESTIMATES *(Continued)*

Questions (Cont'd)

5. COMPUTE THE FIX ESTIMATE

A31748 A10/P T310 66 02	IGB 1421	↓ SQS	100	KGWO	KCBM IGB V278 SQS KGWO

38

☞ ***NOTE:*** *Click once to show answer.*

ANSWER: *1439*

6. COMPUTE THE FIX ESTIMATE

N68TR C182/A T185 66 01	HEZ 1748	↓ MHZ	70	KJAN	KAEX V245 MHZ KJAN

39

☞ ***NOTE:*** *Click once to show answer.*

ANSWER: *1814*

EXERCISE 3: RECORDING FLIGHT PLANS AND DETERMINING FIX POSTINGS

Exercise 3

RECORDING FLIGHT PLANS AND DETERMINING FIX POSTING EXERCISE

Purpose: to practice recording flight plans and determining fix postings

Directions: copy flight progress strips read by your instructor, determine fix postings, and then prepare flight progress strips

40

Part 1 Directions

Your instructor will read ten flight plans, which you will copy on the **bottom** strip on each of the next ten pages.

☞ ***NOTE:*** *Walk through the first strip (Parts 1 and 2) with students and then have them complete the rest of the exercise individually.*

☞ ***NOTE:*** *Read the first flight plan strip of each item to students. Have them record the flight plan information on the first strip for each item. When reading the flight plans, do **not** give next fix and estimate. Students will determine fixes and estimates in Part 2. Give **only**:*

- *Previous fix and estimate, or*
- *Departure airport and proposed time*

Continued on next page

EXERCISE 3: RECORDING FLIGHT PLANS AND DETERMINING FIX POSTINGS *(Continued)*

Part 2 Directions

You will use the flight plan proposal information copied in Part 1 of this exercise to determine the fix posting(s) required. Using the blank strips supplied in Part 1, copy the estimates and prepare all required strips for each of the ten flight plans. You may **not** need to use all the strips provided. Also, you may want to remove the pages from your binder for ease of use during this exercise.

☞ ***NOTE:*** *After students have completed Parts 1 and 2, you may select students to write answers on the board or show students answers using the graphics. Click the button once to make the answers appear on the strips in each graphic. Have students correct their strips.*

☞ ***NOTE:*** *ETEs/ETAs omitted on purpose.*

IN CONCLUSION

Lesson Review

LESSON REVIEW

The following topics were covered in this lesson:

- Fix postings for departure, arrival, and en route aircraft
- Designated spaces for data entries and control symbols
- Calculating estimates using plus times

51

☞ ***NOTE:*** *Teach from graphic. Review and elaborate briefly on the topics covered in this lesson.*

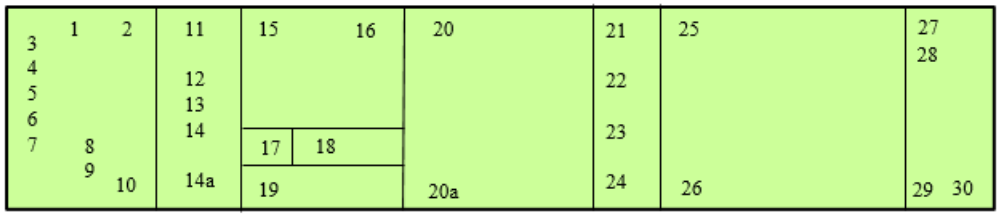
APPENDIX B: FLIGHT PROGRESS STRIP FOR EN ROUTE DATA ENTRIES

Flight Progress Strip Spaces
JO 7110.65, par. 2-3-2



⊙ This is a nonradar strip.

Key

SPACE	CONTENT
1	Verification symbol, if required
2	Revision number (**Not** used in ERAM)
3	Aircraft Identification (AID)
4	Number of aircraft if more than one, Heavy Aircraft indicator if appropriate, type of aircraft, and equipment suffix H/ - Heavy
5	Filed true airspeed
6	Sector number
7	Computer Identification (CID) number, if required
8	Estimated ground speed
9	Revised ground speed or Strip Request (SR) originator
10	Strip number
11	Previous fix
12	Estimated time over previous fix
13	Revised estimated time over previous fix
14	Actual time over previous fix, or actual departure time entered on first fix posting after departure
14a	Plus time expressed in minutes from the previous fix to the posted fix
15	Center-estimated time over fix (in hours and minutes) or clearance information for departing aircraft
16	Arrows to indicate if aircraft is departing (↑) or arriving (↓)
17	Pilot-estimated time over fix

Continued on next page

APPENDIX B: FLIGHT PROGRESS STRIP FOR EN ROUTE DATA ENTRIES *(Continued)*

Key (Cont'd)

SPACE	CONTENT
18	Actual time over fix, time leaving holding fix, arrival time at nonapproach control airport if space 19 is the airport, or symbol indicating cancellation of IFR flight plan for arriving aircraft, or departure time (actual or assumed)
19	Fix (for departing aircraft, add proposed departure time)
20	Altitude information (in hundreds of feet)
20a	**OPTIONAL USE,** when voice recorders are operational; **REQUIRED USE,** when the voice recorders are not operating and strips are being use at the facility. This space is used to record reported RA events. The letters RA followed by a climb or descent arrow (if the climb or descent action is reported) and the time (hhmm) the event is reported.
21	Next posted fix or coordination fix
22	Pilot's estimated time over next fix, or arrival time (at non approach control airport) if space 21 is the airport.
23	Arrows to indicate north (↑), south (↓), east (→), or west (←) direction of flight if required
24	Requested altitude
25	Point of origin, route as required for control and data relay, and destination
26	Pertinent remarks, minimum fuel, point out/radar vector/speed adjustment information or sector/position number (when applicable in accordance with JO 7110.65, paragraph 2-2-1, or NRP
27	Mode 3/A beacon code, if applicable
28	Miscellaneous control data (expected further clearance time, time cleared for approach, etc.)
29-30	Transfer-of-control data and Coordination indicators

⊙ Facility air traffic managers may authorize the optional use of spaces 13, 14, 14a, 22, 23, 24, and 28 for point out information, radar vector information, speed adjustment information, or transfer-of-control data.

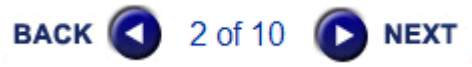
APPENDIX D: INSTRUCTOR KEY FOR ELEARNING ACTIVITIES

Purpose

This document serves as a guide for facilitating the eLearning activities of the Initial En Route Training course and provides an overview of the objectives and content of the eLearning activities within this lesson.

Navigation

- To navigate within the eLearning activities, a Navigation Bar is positioned at the top right of the page and contains the following options:
  - MAIN MENU: Allows students to access a main menu listing all of the eLearning activities
  - RESOURCES: Allows students to access additional resources, including:
    - A **Glossary** link
    - A **References** link
    - A **Help** link
  - EXIT: Allows students to exit from the eLearning activity at any time



- To navigate within an activity, a navigation tab is also positioned near the top right of the screen, just below the navigation bar.
  - The navigation tab contains the following buttons:
    - BACK: When active, returns students to the previous page
    - NEXT: When active, allows students to advance to the next page

NOTE: Inactive BACK and NEXT buttons indicate students are at the beginning or at the end of a lesson.

Navigation Tips

- To refresh a page or reset an activity, press **F5**.
- You can advance to a specific page in the activity without completing the activity. Click the **NEXT** or **BACK** buttons until the page is displayed.

APPENDIX D: INSTRUCTOR KEY FOR ELEARNING ACTIVITIES (*Continued)*

Lesson Title

Lesson 5 Flight Progress Strips

eLearning Objective

The objective of the eLearning activities is to reinforce identifying control symbols and designated spaces for data entries and control symbols on flight progress strips.

eLearning Activities

⊙ Lesson 5 contains the following eLearning activities:

- Activity 1: Proposal/Departure Strip
- Activity 2: En Route Strip
- Activity 3: Arrival Strip
- Activity 4: Flight Progress Strip Challenge

Activity 1: Proposal/Departure Strip

Activity 1 Description

In this activity, students are presented with blank flight progress strips and flight progress strip data. Students **must** drag and drop data to the correct space on the flight progress strip. They are also presented with completed flight progress strips and **must** drag and drop data to the corresponding places on the table. In addition, students are given hot spot questions related to flight progress strips spaces.

Activity 1 Content

⊙ Page 1 contains an activity introduction.

⊙ Pages 2-7 contain a drag and drop activity for departure and proposal strips.

⊙ Pages 8 and 9 contain a series of hot spot questions, in which students are given a flight progress strip space name and then **must** click the corresponding space on the flight progress strip image.

Continued on next page

APPENDIX D: INSTRUCTOR KEY FOR ELEARNING ACTIVITIES *(Continued)*

Activity 1 Specifics

- ⊙ Drag and drop questions
  - On pages 2-7, if students drag and drop flight data to an incorrect space on the flight progress strip or on the data table, the data will snap back to its original position.
- ⊙ Hot spot questions
  - On pages 8 and 9, students have two attempts to answer before they are given the correct answer.

Activity 2: En Route Strip

Activity 2 Description

In this activity, students are presented with blank flight progress strips and flight progress strip data. Students **must** drag and drop data to the correct space on the flight progress strip. They are also presented with completed flight progress strips and **must** drag and drop data to the corresponding places on the table. In addition, students are given hot spot questions related to flight progress strips spaces.

Activity 2 Content

- ⊙ Page 1 contains an activity introduction.
- ⊙ Pages 2-7 contain a drag and drop activity for en route strips.
- ⊙ Pages 8 and 9 contain multiple choice questions regarding the en route strip.

Activity 2 Specifics

- ⊙ Drag and drop questions
  - On pages 2-7, if students drag and drop flight data to an incorrect space on the flight progress strip or on the data table, the data will snap back to its original position.
- ⊙ Multiple choice questions
  - On pages 8 and 9, students have two attempts to answer before they are given the correct answer.

Continued on next page

APPENDIX D: INSTRUCTOR KEY FOR ELEARNING ACTIVITIES *(Continued)*

Activity 3: Arrival Strip

Activity 3 Description

In this activity, students are presented with blank flight progress strips and flight progress strip data. Students **must** drag and drop data to the correct space on the flight progress strip. They are also presented with completed flight progress strips and **must** drag and drop data to the corresponding places on the table. In addition, students are given hot spot questions related to flight progress strips spaces.

Activity 3 Content

- Page 1 contains an activity introduction.
- Pages 2-7 contain a drag and drop activity for arrival strips.
- Page 8 contains one multiple choice question regarding the arrival strip.

Activity 3 Specifics

- Drag and drop questions
  - On pages 2-7, if students drag and drop flight data to an incorrect space on the flight progress strip or on the data table, the data will snap back to its original position.
- Multiple choice question
  - On page 8, students have two attempts to answer before they are given the correct answer.

Activity 4: Flight Progress Strip Challenge

Activity 4 Description

This eLearning activity allows students to test their knowledge of proposal/departure, en route, and arrival strips by completing timed quiz questions. There are a total of 15 hot spot questions in Round 1.
In Round 2, students are presented with a different set of questions and should attempt to answer more questions correctly as well as to improve their time from the previous round.

Continued on next page

APPENDIX D: INSTRUCTOR KEY FOR ELEARNING ACTIVITIES *(Continued)*

Activity 4 Content

- ⊙ Pages 1 and 3 contain an activity introduction.
- ⊙ Page 2 contains a hot spot quiz with 15 questions regarding proposal/departure, en route, and arrival strips.
- ⊙ Page 4 contains a hot spot quiz with 15 questions regarding proposal/departure, en route, and arrival strips.

Activity 4 Specifics

- ⊙ Hot spot quizzes
  - Students have 5 minutes to complete each quiz.
  - Students have one attempt to answer the question before they are given the correct answer.
  - At the end of each quiz, students will see their quiz results. They should click **REVIEW ANSWERS** to see their marked answers and the correct answers.
