Federal Aviation Administration

Initial En Route Qualification Training

Lesson 05
Flight Progress Strips

Course 50148001

LESSON PLAN DATA SHEET

COURSE NAME:	INITIAL EN ROUTE QUALIFICATION TRAINING
COURSE NUMBER:	50148001
LESSON TITLE:	FLIGHT PROGRESS STRIPS
DURATION:	8+15 HOURS
DATE REVISED:	2022-02
VERSION:	V.2022-02
REFERENCE(S):	FAA ORDER JO 7110.65, AIR TRAFFIC CONTROL
HANDOUT(S):	NONE
EXERCISE/(S)/ ACTIVITY(S):	ACTIVITY 1: PROPOSAL/DEPARTURE STRIP ACTIVITY 2: EN ROUTE STRIP ACTIVITY 3: ARRIVAL STRIP ACTIVITY 4: FLIGHT PROGRESS STRIP CHALLENGE EXERCISE 1: IDENTIFYING INFORMATION ON FLIGHT PROGRESS STRIPS EXERCISE 2: COMPUTING AND RECORDING PLUS TIMES AND ESTIMATES EXERCISE 3: RECORDING FLIGHT PLANS AND DETERMINING FIX POSTING (USE AERO CENTER MAP WITH JET ROUTES FOR THIS EXERCISE)
END-OF-LESSON TEST:	YES
PERFORMANCE TEST:	NONE
MATERIALS:	NONE
OTHER PERTINENT INFORMATION:	

INTRODUCTION

You have been introduced to the airspace for which you are responsible including airways, NAVAIDs, MEAs, sectors, Special Use Airspace, fixes, and mileages, etc. Now you will be introduced to flight progress strips. The ability to accurately recall your airspace will allow you to use flight progress strips to safely and efficiently move aircraft through your sector.

INTRODUCTION *(Continued)*

FLIGHT PROGRESS STRIPS

2

Flight progress strips are an official record of control data and are used to reconstruct flight activities in the event of a systems error, deviation, or accident. Even with advanced automation systems, strips are still required in the field.

You will use flight progress strips to anticipate and organize flights entering, within, and leaving your airspace. It is essential for controllers to be proficient in quickly identifying and interpreting the data contained in the various types of flight progress strips.

Purpose

In this lesson, you will be taught how to prepare flight progress strips for departure, arrival, and en route flight plans, including which fix postings are required for a given flight plan based on the filed route and where to enter this data on the flight progress strip. You will also learn how to determine and enter estimates using plus times.

Continued on next page

INTRODUCTION *(Continued)*

Lesson Objectives

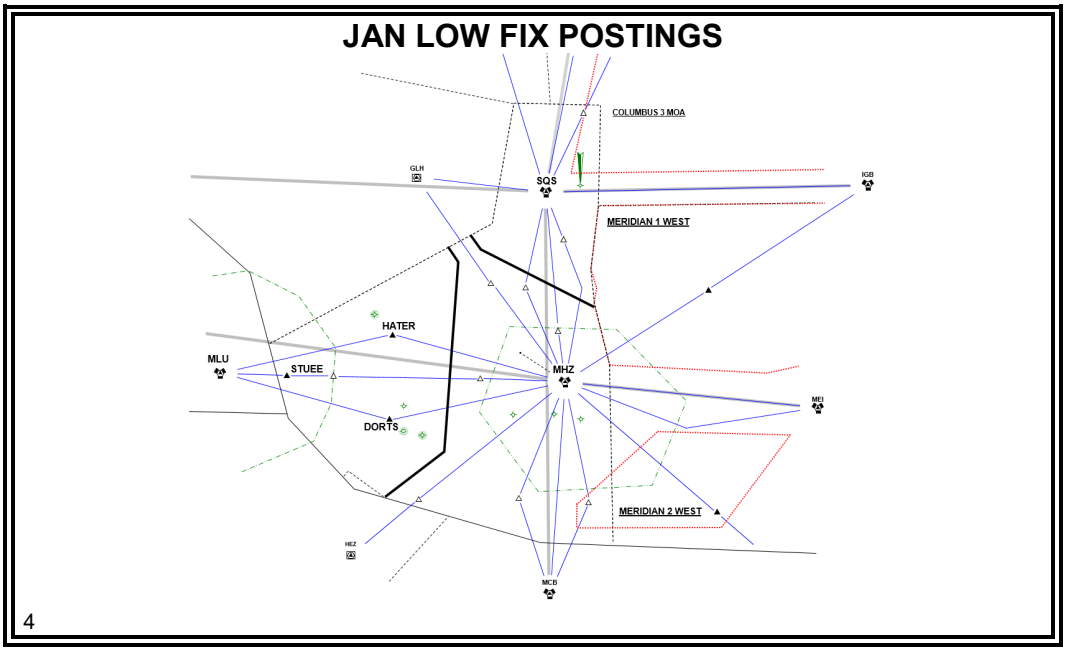
LESSON OBJECTIVES

- On an End-of-Lesson Test, and in accordance with FAA Order JO 7110.65 and the Aero Center (ZAE) Map, you will:
  - Determine the required fix postings for departure, arrival, and en route aircraft
  - Identify designated spaces for data entries and control symbols
  - Determine estimates using plus times

3

FIX POSTINGS

JAN Low Altitude Fix Postings
Aero Center Map



- This section covers Fix Posting Areas (FPAs) for Aero Center (Jackson Low sector).

- Jackson Low sector is divided into three FPAs (SQS, MHZ, VKS).
  - These FPAs are also used as bay headers
    - Bay headers allow for a more organized traffic search since there is **only** one strip per aircraft in each FPA

- Each route or airway in the Jackson Low sector has a specific fix posting for each FPA.

  Example: Victor 18 has two fix postings: one at MHZ and one at STUEE, which is posted under the VKS bay header.

NOTE: A list of JAN Low sector fix postings for both victor and jet airways is included in Appendix A of this lesson.

- Each airway/route has at least one fix posting (strip) in the Jackson Low sector.

Continued on next page

FLIGHT PROGRESS STRIPS

Stripmarking Use
JO 7110.65, par. 2-3-1

⊙ Flight progress strips are used to record data on air traffic and clearances that is required for control and other air traffic services.

- Maintain **only** necessary current data
  - Remove strips when **no** longer required for control purposes
- Do **not** erase or overwrite
  - Use an “X” to delete:
    - → Climb/descend and maintain arrows
    - → At or above/below symbols
    - → Cruise symbol
    - → Unwanted altitude information
  - Write new altitude information immediately adjacent to old information and within the same space
    - → Draw a horizontal line through other items
    - → Do **not** draw a line through an altitude until the aircraft reports or is observed (valid Mode C) leaving the altitude

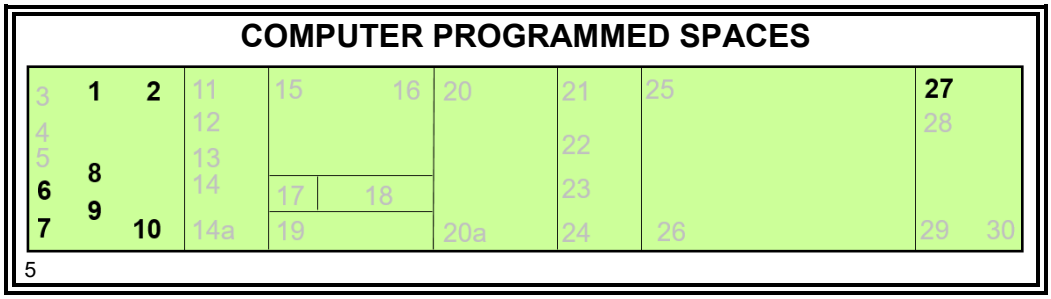
⊙ Preplanning may be written in red.

- Rewrite in black after the clearance is issued
  - Do **not** overwrite

⊙ Manually prepared strips **must** conform to the same format as machine-generated strips.

FLIGHT PROGRESS STRIPS *(Continued)*

Computer Programmed Spaces
JO 7110.65, par. 2-3-2



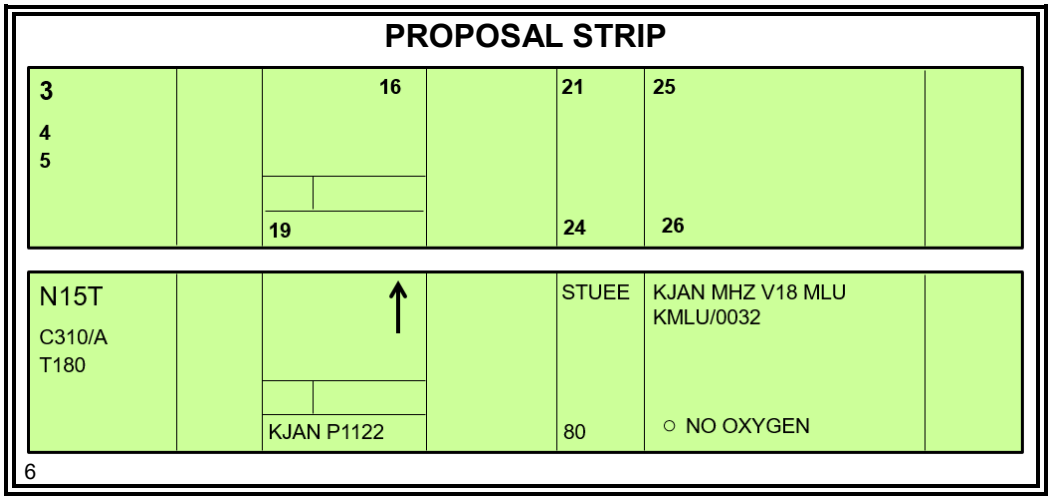
NOTE: For a complete list of the spaces where data is entered on a flight progress strip, see Appendix B.

⊙ The computer will put information in the following computer-programmed spaces:

- Space 1 - Verification symbol, if required
- Space 2 - Revision number
- Space 6 - Sector number
- Space 7 - Computer Identification (CID) number
- Space 8 - Estimated ground speed
- Space 9 - Strip Request (SR) originator or revised ground speed
- Space 10 - Strip number
- Space 27 - Mode 3/A beacon code, if applicable

PROPOSAL STRIP

Proposal Strip
JO 7110.65, pars. 2-3-6, 2-3-2, 2-3-8, table 2-3-10;



⊙ A proposal strip should include the following information:

- Space 3 - Aircraft Identification (AID)
  - Appropriate prefix followed by a combination of letters and/or numbers
  - Seven maximum allowable characters
- Space 4 - Aircraft data
  - Number of aircraft, if more than one
  - Heavy indicator, if appropriate
    - → "H" followed by slant (/)
  - Type aircraft

NOTE: JO 7110.65 par. 2-3-6 requires, in both automated and non-automated environments, the use of the approved aircraft type codes contained in Appendices A-C to indicate aircraft type.

  - Equipment suffix
    - → Appropriate letter preceded by slant (/) and following aircraft type indicating aircraft's transponder, DME, or RNAV capability

Continued on next page

PROPOSAL STRIP *(Continued)*

Proposal Strip (Cont'd)
JO 7110.65, pars. 2-3-6, 2-3-2, 2-3-8, table 2-3-10;

	No Transponder	Transponder – No Mode C	Transponder With Mode C
No DME	X	T	U
DME	D	B	A
TACAN Only	M	N	P
RNAV	Y	C	I

NOTE: Equipment suffix determines type of clearance/routing aircraft can accept. For example, a /X cannot accept a clearance with a DME crossing restriction and in a radar environment, a /X cannot ident for radar identification.

NOTE: The above chart lists **only** those suffixes most commonly used in ZAE nonradar labs. The complete chart from FAA Order JO 7110.65 is in Appendix C of this lesson.

- Space 5 - Filed true airspeed
  - "T" followed by two to four digits
  - "SC" = Speed Classified
- Space 16 - Departure arrow (↑)
- Space 19 - Fix and proposed departure time
  - Location identifier
  - "P" followed by 4-digit Proposal time (P-time)
- Space 21 - Next posted fix or coordination fix

Continued on next page

PROPOSAL STRIP *(Continued)*

Proposal Strip (Cont'd)
JO 7110.65, pars. 2-3-6, 2-3-2, 2-3-8, table 2-3-10;

- Space 24 - Requested altitude
  - Single altitude
    - → Two or three digits representing altitude in hundreds of feet
  - Altitude block
    - → "(Altitude)B(altitude)"
    - → Lowest altitude first
- Space 25 - Point of origin, route, and destination
  - Location identifier
  - Victor airways, jet routes, or direct routes
  - Estimated Time En Route (ETE) follows destination on general aviation departure aircraft
    - → To convert ETE to Estimated Time of Arrival (ETA), add ETE to departure time. General aviation pilots are required to file ETE.
- Space 26 - Pertinent remarks
  - Use plain language, or
  - Words/phrases/symbols contained in FAA Order JO 7110.65, par. 1-2-1

NOTE: KJAN proposal strips do not have a dedicated space for a MHZ VORTAC progress time. If a MHZ progress time is needed for separation, it must be recorded in space 26 using this format: MHZ/XXXX. KGWO proposal strips do not have a dedicated space for a SQS VORTAC progress time. If a SQS progress time is needed for separation, it must be recorded in space 26 using this format: SQS/XXXX.

- Space 27 - Beacon code
  - Normally assigned by the computer

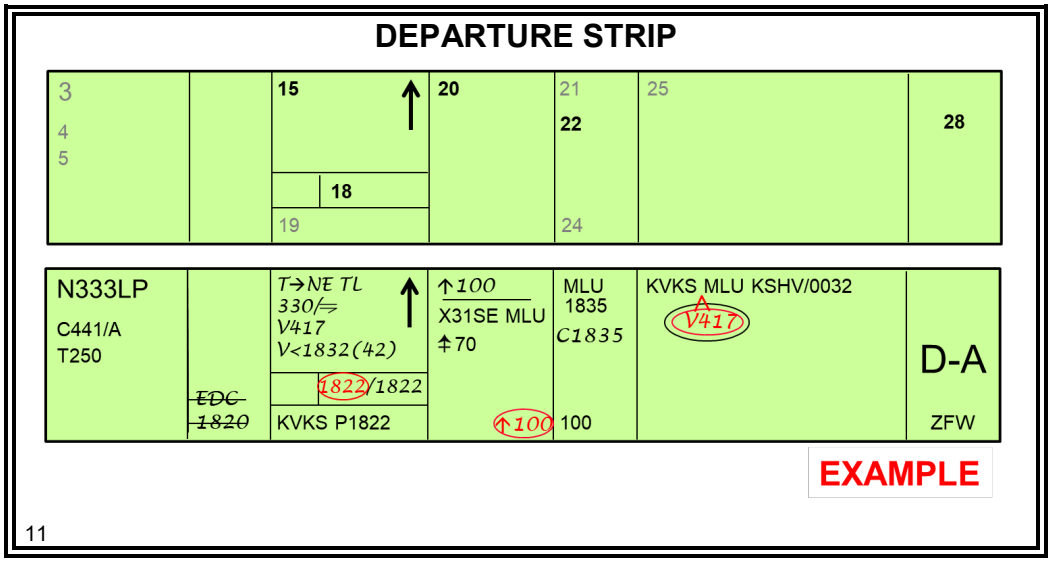
10

DEPARTURE STRIP

Departure Strip
JO 7110.65, par. 2-3-2



⊙ A departure strip should include the following information:

- Space 15 - Clearance information for departing aircraft
- Space 18 - Departure time (assumed and/or actual)
- Space 20 - Altitude information
  - Including restrictions
- Space 22 – Pilot's estimated time over next fix, Center estimated time over next fix (written in the format "C1234") under the pilot's estimated time.
- Space 28 - Miscellaneous control data
  - Clearance limit
- Spaces 29-30 - Transfer-of-control data and coordination indicator, if required

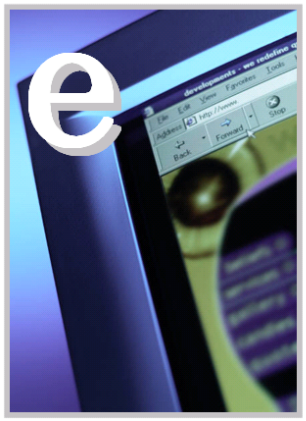
Activity 1

PROPOSAL/DEPARTURE STRIP ACTIVITY



Purpose: to practice identifying and labeling designated spaces on proposal and departure strips

15

Description

In this activity, you will practice identifying and labeling designated spaces on proposal and departure strips.

Directions

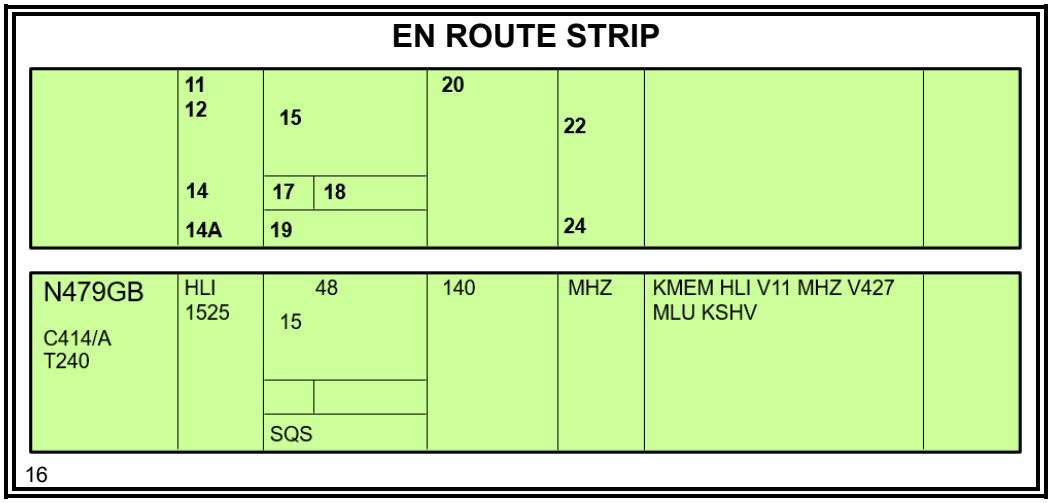
Access the IET eLearning menu. Select **Lesson 5 – Flight Progress Strips**. Click on the title to launch the **Proposal/Departure Strip** activity.

Time Allotted

10 minutes

EN ROUTE STRIP

En Route Strip
JO 7110.65, par. 2-3-2



⊙ An en route strip should include the following information:

- Space 11 - Previous fix
- Space 12 - Estimated time over previous fix

NOTE: The time in Space 12 of an en route flight strip is usually a center estimate.

- Space 14A - Plus time expressed in minutes from the previous fix to the posted fix
  - Determined by the distance between the two fixes and the speed of the aircraft using the Quick Estimate Method

NOTE: Calculations for Plus Time and Post Fix Estimates will be explained in subsequent slides.

- Space 15 - Center estimate over the posted fix
- Space 19 - Posted fix
- Space 20 - Altitude information

Continued on next page

EN ROUTE STRIP *(Continued)*

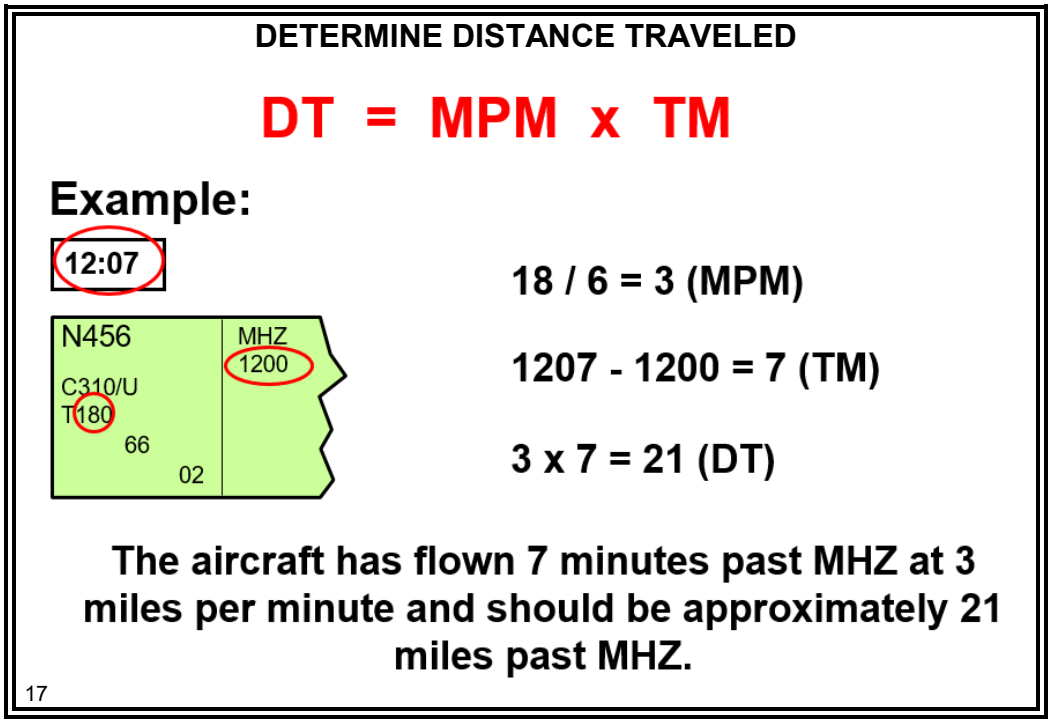
En Route Strip (Cont'd)
JO 7110.65, par. 2-3-2

⊙ An en route strip may also include the following information:

- Space 14 - Actual departure time entered on first fix posting after departure
- Space 17 - Pilot-estimated time over fix
- Space 18 - Actual time over fix
- Space 22 – Pilot's estimated time over next fix, center estimated time over next fix (calculate center estimates only when you need to prove separation)
- Space 24 – Requested Altitude

EN ROUTE STRIP *(Continued)*

Quick Estimate Method



⊙ Quick Estimate Method

- Use this method to determine the distance an aircraft will travel in an allotted time
  - Divide the first two digits of the aircraft's speed by 6 to determine Miles Per Minute (MPM)
  - Distance Traveled (DT) equals MPM multiplied by Time in Minutes (TM)

NOTE: Time in minutes comes from difference between fix time and clock time.

Example: An aircraft has a MHZ estimate of 1200. Clock time is 1207. True airspeed is 180 knots (3 miles per minute). Aircraft has flown 7 minutes past MHZ at 3 miles per minute and should be approximately 21 miles past MHZ.

DT = 3 x 7
DT = 21 miles

Continued on next page

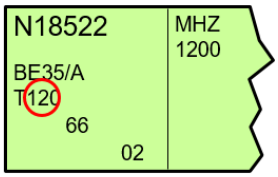
EN ROUTE STRIP *(Continued)*

Quick Estimate Method (Cont'd)

DETERMINE CENTER ESTIMATES

$$TM = \frac{DT}{MPM}$$

Example:



58 = DT between MHZ and SQS

12 / 6 = 2 MPM

58 / 2 = 29 (TM)

The aircraft is traveling 58 miles (DT) between MHZ and SQS at 2 miles per minute (MPM). The time in minutes for this travel is 29 minutes, which added to the MHZ estimate of 1200, means the estimate for SQS is 1229.

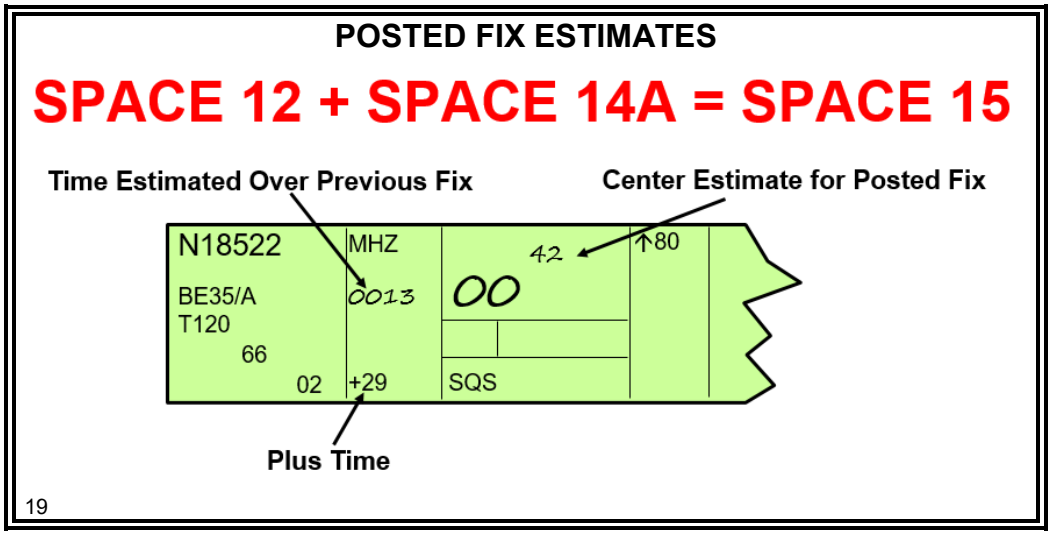
18

- Use this method to compute center estimates at fixes

Continued on next page

EN ROUTE STRIP *(Continued)*

Post Fix Estimate



⊙ Use this method to compute posted fix estimates.

- Time estimated over the previous fix added to the plus time results in the center estimate for the posted fix

Continued on next page

Time Allotted 10 minutes

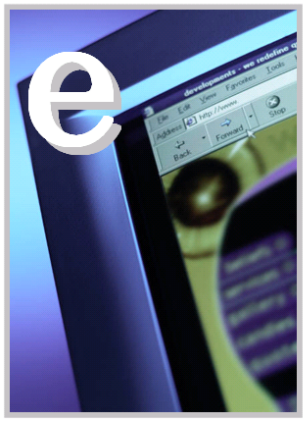
FLIGHT PROGRESS STRIP CHALLENGE

Activity 4

FLIGHT PROGRESS STRIP CHALLENGE ACTIVITY



Purpose: to practice identifying and labeling designated spaces on proposal, en route, and arrival strips

25

Description

In this activity, you will practice identifying and labeling designated spaces on proposal, en route, and arrival strips.

Directions

Access the IET eLearning menu. Select **Lesson 5 – Flight Progress Strips**. Click on the title to launch the **Flight Progress Strip Challenge** activity.

Time Allotted

15 minutes

EXERCISE 1: IDENTIFYING INFORMATION ON FLIGHT PROGRESS STRIPS

Exercise 1

IDENTIFYING INFORMATION ON FLIGHT PROGRESS STRIPS EXERCISE

Purpose: to practice identifying information on flight progress strips

Directions: review provided strips and answer the corresponding questions

26

Directions

Items 1 through 15 are short answer. Review the strips provided to answer the questions. All strips in this exercise would be posted in the same bay. Some questions refer to more than one strip. Write your answers in the spaces provided.

Questions

EXERCISE 1 STRIPS – Q1, Q2, Q3

QUESTION 13: What is the posted fix for FDX1726?

QUESTION 14: What type of strip is this?

QUESTION 15: If the time is now 1400, in how many minutes is FDX1726 expected over the posted fix?

EXERCISE 2: COMPUTING AND RECORDING PLUS TIMES AND ESTIMATES

Exercise 2

COMPUTING AND RECORDING PLUS TIMES AND ESTIMATES EXERCISE

Purpose: to practice computing plus times and posted fix estimates

Directions: review provided strips and determine plus times or posted fix estimates as appropriate

33

Directions

For items 1 through 6, use the strips provided to compute the plus times for inactive flights and posted fix estimates for active flights. Write your answers in the spaces provided. Refer to the Aero Center map to obtain mileages.

Continued on next page

EXERCISE 2: COMPUTING AND RECORDING PLUS TIMES AND ESTIMATES *(Continued)*

Questions

1. COMPUTE THE PLUS TIME

EXERCISE 3: RECORDING FLIGHT PLANS AND DETERMINING FIX POSTINGS

Exercise 3

RECORDING FLIGHT PLANS AND DETERMINING FIX POSTING EXERCISE

Purpose: to practice recording flight plans and determining fix postings

Directions: copy flight progress strips read by your instructor, determine fix postings, and then prepare flight progress strips

40

Part 1 Directions

Your instructor will read ten flight plans, which you will copy on the **bottom** strip on each of the next ten pages.

Continued on next page

Part 2 Directions

You will use the flight plan proposal information copied in Part 1 of this exercise to determine the fix posting(s) required. Using the blank strips supplied in Part 1, copy the estimates and prepare all required strips for each of the ten flight plans. You may **not** need to use all the strips provided. Also, you may want to remove the pages from your binder for ease of use during this exercise.

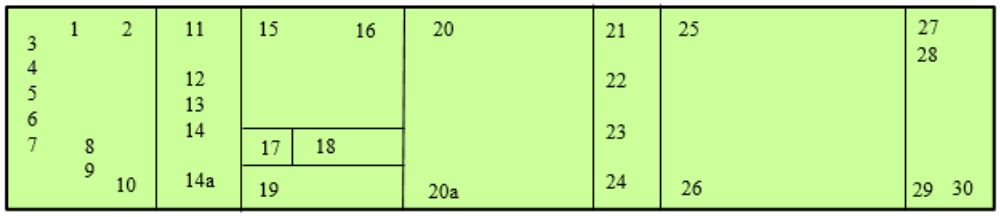
APPENDIX B: FLIGHT PROGRESS STRIP FOR EN ROUTE DATA ENTRIES

Flight Progress Strip Spaces
JO 7110.65, par. 2-3-2



⊙ This is a nonradar strip.

Key

SPACE	CONTENT
1	Verification symbol, if required
2	Revision number (**Not** used in ERAM)
3	Aircraft Identification (AID)
4	Number of aircraft if more than one, Heavy Aircraft indicator if appropriate, type of aircraft, and equipment suffix H/ - Heavy
5	Filed true airspeed
6	Sector number
7	Computer Identification (CID) number, if required
8	Estimated ground speed
9	Revised ground speed or Strip Request (SR) originator
10	Strip number
11	Previous fix
12	Estimated time over previous fix
13	Revised estimated time over previous fix
14	Actual time over previous fix, or actual departure time entered on first fix posting after departure
14a	Plus time expressed in minutes from the previous fix to the posted fix
15	Center-estimated time over fix (in hours and minutes) or clearance information for departing aircraft
16	Arrows to indicate if aircraft is departing (↑) or arriving (↓)
17	Pilot-estimated time over fix

Continued on next page

APPENDIX B: FLIGHT PROGRESS STRIP FOR EN ROUTE DATA ENTRIES *(Continued)*

Key (Cont'd)

SPACE	CONTENT
18	Actual time over fix, time leaving holding fix, arrival time at nonapproach control airport if space 19 is the airport, or symbol indicating cancellation of IFR flight plan for arriving aircraft, or departure time (actual or assumed)
19	Fix (for departing aircraft, add proposed departure time)
20	Altitude information (in hundreds of feet)
20a	**OPTIONAL USE,** when voice recorders are operational; **REQUIRED USE,** when the voice recorders are not operating and strips are being use at the facility. This space is used to record reported RA events. The letters RA followed by a climb or descent arrow (if the climb or descent action is reported) and the time (hhmm) the event is reported.
21	Next posted fix or coordination fix
22	Pilot's estimated time over next fix, or arrival time (at non approach control airport) if space 21 is the airport.
23	Arrows to indicate north (↑), south (↓), east (→), or west (←) direction of flight if required
24	Requested altitude
25	Point of origin, route as required for control and data relay, and destination
26	Pertinent remarks, minimum fuel, point out/radar vector/speed adjustment information or sector/position number (when applicable in accordance with JO 7110.65, paragraph 2-2-1, or NRP
27	Mode 3/A beacon code, if applicable
28	Miscellaneous control data (expected further clearance time, time cleared for approach, etc.)
29-30	Transfer-of-control data and Coordination indicators

⊙ Facility air traffic managers may authorize the optional use of spaces 13, 14, 14a, 22, 23, 24, and 28 for point out information, radar vector information, speed adjustment information, or transfer-of-control data.

APPENDIX C: EQUIPMENT QUALIFIERS

Equipment Qualifiers
